

For as low as \$99, your practice can upgrade to having a RADIOLOGICAL IMAGING Partner

ULTRASOUND IMAGING ADVANCES YOUR PATIENT EXAMS & MONITORING

Therapeutic Specialists in the NY, NJ and CT areas can enjoy the advantages of the remote imaging partnership program with BARD DIAGNOSTICS! Thanks to the latest advancements in today's point-of-care ultrasound (POCUS), monitoring patients' chronic disorders with quantitative imaging has never been simpler or cost-effective. Physicians can now receive the ultrasound training and scanning power they need to investigate injuries and validate treatment efficacy.

Remote connection
with your radiologist

Portable field scanners like the popular high-frequency Clarius™ L15 offers powerful bedside exams and remote collaboration access with top radiologists like Dr. Robert Bard. This Bluetooth and WiFi powered sonogram offers a maximum scanning depth of 7cm - ideally used for MSK, Lung, Nerve/Pain, Ocular, Small Organs, Thyroid and Vascular issues (visit clarius.com for further details or other models).

Soon, you and your practice can:

- offer advanced in-patient exams with real-time quantitative clinical screening
- conduct better investigative testing of chronic issues with medical grade diagnostic imaging
- deliver, share and store imaging information through a private web portal
- collaborate with other physicians or with our certified radiology team for an immediate second opinion
- efficiently work with more patients from anywhere (globally) in less time

UPGRADE YOUR PRACTICE WITH THE POWER OF INTELLIGENT IMAGING TODAY!

TURNKEY ULTRASOUND IMAGING BUSINESS MODEL

We made adding an ultrasound imaging service for your practice simple and ready to go. Our fellow providers enjoy a partnership with our diagnostic imaging facility. Dr. Robert Bard leads a turn-key set of imaging programs – one that will greatly suit the needs of your exact practice. Our imaging services are backed by state-of-the-art technologies and world class radiological expertise that greatly elevates the strength of your practice.

1) EVALUATING THE RIGHT SCANNER FOR YOUR PRACTICE

Bard Diagnostics will provide a free shoppers' guide to find you the best model to suit your practice's needs. From medical-grade hand-held ultrasound models to tabletop semi-portable versions to hospital-grade (large) appliances, our tech guide has access to the current models and specifications.

2) TRAINING

Most/all ultrasound manufacturers offer private workshops and training at low or no cost. Additional training and tech orientation is available from Bard Diagnostics' tech team as needed.

3) MARKETING PARTNER (A \$275-\$350/month value!)

Your health practice can be a BARD DIAGNOSTICS partner in no-time. Use of our brand allows you all our educational and marketing materials to support the promotion of your new imaging service. This relationship also includes updates in our marketing catalog, web/social media posts, infomercial articles, research access, publishing and PR services and major discounts on our network outreach promotions.

4) BILLING

Having an ultrasound service is a value added asset to your health practice. You can bill for either the technical service of managing/navigating the ultrasound transducer (probe) either through insurance or cash. [Estimated billing charges TBA]. Under our partnership, employing Bard Diagnostics and access to Dr. Bard as your designated radiologist and digital overreader (interpretation services) can be billable directly to the patient or the patient's insurance. Certain cases may allow for the partnering practice to bill the patient for Bard Diagnostics (TBA).

5) RESEARCH SCAN PROGRAM

Join our scanning points plan. Bard Diagnostics supports medical research and functional health validation by inviting practices to join its current pilot studies and clinical trials. Output reports add to the support of your therapeutic practice. Budgeted clinical trials can consider your participation as part of its grant considerations. TBA

2024 REMOTE & CO-REFERRAL DIAGNOSTIC IMAGING PARTNERSHIPS: A VALUE ADDED SERVICE UPGRADE FOR YOUR PRACTICE

For all independent colleagues in patient care, we are proud to introduce our 2024 partnership program of both Bard Diagnostics and IHRC (Integrative Health Research Center). This year, we have expanded our health services to include an array of the latest in non-invasive innovations in the diagnostic and therapeutic fields. Our partnership program formally helps expand your current practice's marketing and patient support capabilities by officially including a new subset of services that Dr. Bard's office currently provides.

REMOTE SCANNING OR CO-REFERRAL PARTNERSHIPS

Our fellow providers enjoy a partnership with our diagnostic imaging facility. Dr. Robert Bard leads a turn-key set of imaging programs – one that will greatly suit the needs of your exact practice. Our imaging services are backed by state-of-the-art technologies and world class radiological expertise that greatly elevates the strength of your practice.

- **EARLY DETECTION:** Standard mammography + supplemental dense-breast ultrasound
- **UNDER 40 BREAST SCREENING:** special early detection program for younger women 20-39
- **SKIN-SCAN PLUS:** Quantitative diagnostic imaging for inflammatory skin concerns / disorders
- **MSK (INJURY) IMAGING:** Musculoskeletal injuries and chronic organ issues
- **PROSTATE SCREENING:** Pre/Postop scanning, annual imaging exams & second opinion imaging
- **"DIGITAL BIOPSY"**- a second opinion scan of alleged cancerous mass/growths
- **PELVIC FLOOR ULTRASOUND IMAGING:** for a variety of chronic women's health disorders
- **RETINAL SCAN:** supportive of physiological studies related to diabetes
- **INTEGRATIVE COLLABORATION:** exploratory patient care diagnostic-to-therapeutic joint efforts combining analytical and quantitative imaging services with current therapeutic specialty modalities
- **REMOTE OVERREADING:** For practice in NY, NJ, CT and FLA, we offer clinical reporting / interpretive readings of your ultrasound imaging. Dr. Bard, a board-certified radiologist offers his clinical capacity to formalize your local scans into a billable medical report through our secure and private TeleMedScans™ portal.

REMOTE OVERREADING NETWORK

1) R.E.D.S. : Remote Emergency Diagnostic Solutions

<http://barddiagnostics.com/reds.html>

This is our blueprint to installing point of care ultrasounds in every ambulance rig. R.E.D.S. Saves lives from real-time access to diagnostics of any patient- when seconds count. Through the use of wifi-powered ultrasound, we are able to centralize the radiologist for fast access to the injured patient's scans- guiding the scanning tech (or EMT) to act on the current state of that patient while en route to the ED.

R.E.D.S. FOR SPORTS

For the purposes of athletic programs, the concept of a CLINICAL CENTRAL READING OFFICE servicing REMOTE/FIELD SCANNERS is like having a radiologist on the sidelines AS NEEDED.

Where injuries can happen at any given moment on the sports field, managing players' health and safety means getting the right status on their condition upon impact. The use of point of care ultrasound is the ideal diagnostic scanning tool + having an experienced overreader during the game makes for a real-time detection solution when precious seconds count.

2) VIRTUAL RADIOLOGY PARTNERSHIP

With the latest in remote medical collaboration, we are prepared to build a diagnostic bridge with your practice through the use the current file-sharing standards of teleradiology / telemedicine and clinical overreading.

3) EDUCATION & TRAINING

Dr. Bard supports the global access of ultrasound technology in any health facility. This includes a comprehensive educational tour and training on the current solutions available. This also covers informational reporting on medical technologies, therapeutics and diagnostic innovations.
