

NON-INVASIVE DIAGNOSTIC SCIENCE

Newsletter published by the BARD DIAGNOSTIC IMAGING Center 

FUNCTIONAL DIAGNOSTIC IMAGING & PERSONALIZED SCREENING CENTER (NYC)

For the independent health practice promoting personalized healthcare, BARD DIAGNOSTICS complements your visionary practice with individualized imaging and advanced genetic testing. Our referral partners benefit greatly from our highly integrative and advanced access programs.

We offer a customizable program that serves health practices' diagnostic needs for real-time medical scanning, personalized testing and supportive 2nd opinion/validation exams. Partnering with our FUNCTIONAL DIAGNOSTICS group offers true empowerment to wellness and disease prevention programs. Part of our services may include a full multi-modality workup of the patient's genomic and gene expression report. This comprehensive study of the patient's symptomatology is also supported by the use of the latest quantitative imaging to form a balanced report about the body's physiology.

DIRECT TO PATIENT

The assessment of actual or potential chronic disorders is what makes Bard Diagnostics (NYC) a recognized name in the medical community. Our seasoned experts in integrative health are ready and equipped to receive patients either through referrals or direct inquiries. Our medical office is fully staffed and equipped to conduct all services comporting to the high standards of Functional Diagnostics & Testing. Individuals implementing self-leadership by seeking out more intuitive and

data-driven health testing strategies raise the bar in supporting our patients' mission for longevity and sustainable health. Pursuing a FUNCTIONAL and INTEGRATIVE diagnostic model of care brings the patient into an entire world of sensible and more targeted health strategies. Our

clinicians are dedicated to the science of addressing disease and disorders more intuitively through whole-body solutions.

CLINICAL OUTSOURCE PARTNER

Our diagnostic team partners with private physicians to provide a service upgrade for their current programs. Our catalog of personalized imaging led by world-class radiologists and sonologists offer added peace of mind to patients of every level of health concern. We also advocate the use of safe (non-radiation) non-invasive biometric technologies and recognized medical imaging that's compatible with all current clinical reporting standards. Our diagnostic experts are recognized "disease detectives" who work directly with each patient, offering a complete pathological analysis in real time.

FUNCTIONAL GENOMIC & BIOLOGICAL TESTING

Functional Genomics focuses on integrating the many layers of our patients' cellular biology that influence their health. These layers include: DNA, Epigenetics, Gene Expression,

and Metabolic Biochemistry. Genetics and Genomics both focus on DNA, or deoxyribonucleic acid, which makes up the genes that contain our body's operational blueprints. This testing paradigm can be a powerful tool when assessing how genomics, epigenetics, and biological age unites to affect cellular functioning in order to evaluate responses to treatments.

OUR TEAM is comprised of the most dedicated specialists in their respected fields in diagnostic science. We support true personalized patient-centered care. Our collaborative promotes our series of comprehensive quantifiable testing protocols including Advanced Point of Care Imaging, Biological Testing, Pre/Postop Diagnostics and Active Surveillance Monitoring. We made adding a diagnostic service branch for your practice even simpler. Our providers enjoy our priority service connection and our remote/virtual access system for a fully collaborative and efficient experience. For more information on our partnership program, contact our clinical relations department at: 212.355.7017 or visit www.BardDiagnostics.com.
